

intimus DIS 600/1000 Disintegrator

The higher the security requirements for the data destruction, the smaller the particles the material must be shredded into. With conventional shredder technology, this means that the cutting shafts become more and more delicate and thus are also more prone to damage and wear. The disintegrators meet the current trend to higher security requirements for industrial users and the demand for the highest security for governmental locations and banknote printing works at high throughput rates.

Based on proven technology, the intimus disintegrators were perfectly adapted for the reliable and economical shredding of paper and plastics in the form of paper documents, printed valuables such as banknotes or passports, magnetic media such as plastic cards or floppy disks as well as optical media such as CDs or DVDs.

- Security level determinable through screen mesh diameter; DIN levels 3 to 7
- Clearly arranged operating panel
- Solid sheet steel housing with evacuation from hopper
- 1,000 mm feed opening; suitable for all standard computer formats and DIN format A0
- Long live time: Knives can be re-sharpened several times
- Service-friendly through easy access milling chamber

DIN 66 399 - by using the screen sizes
